Art Unit: 2614

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. Note MPEP 606.01.
2. The disclosure is objected to because of the following informalities: disclosure is objected to because of the following informalities: On the first page of applicant's specification, the incorporation by reference a foreign application or patent, is improper. Applicant is required to amend the disclosure to include the material incorporated by reference. The amendment must be accompanied by an affidavit or declaration executed by the applicant, or a practitioner representing the applicant, stating that the amendatory material consists of the same material incorporated by reference in the referencing application. See *In re Hawkins*, 486 F.2d 569, 179 USPQ 157 (CCPA 1973); *In re Hawkins*, 486 F.2d 579, 179 USPQ 163 (CCPA 1973); and *In re Hawkins*, 486 F.2d 577, 179 USPQ 167 (CCPA 1973).

In this specific instance, the attempt to incorporate subject matter into this application by reference to the foreign priority document is improper because since the document has been directly translated into the instant application, it must contain essential subject matter.

On the other hand, if the instant application contains information different from that of the foreign priority document, the instant application would not be entitled to the foreign priority date.

As a better alternative, applicant is advised to delete that statement.

Appropriate correction is required.

3. Claims 1-14 are objected to because of the following informalities: though not a critical issue, applicant should recite the accepted term "*digitizing*" instead of "*digitalizing*" in line 3 of all three independent claims 1, 5 and 11 (also in sections

Art Unit: 2614

[0009], [0010], [0031], and [0038] in the specification). Appropriate correction is required.

Appropriate correction is required.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art does not disclose or suggest arranging a timing recovery stage (involving a matched filter feeding back to a resampler) subsequent to a carrier recovery stage of a digital demodulator, as is claimed.
